micro needle holders

Most of our Micro Needle holders are available with different diameters of jaws, to have the perfect according to the size of the suture and needles used.

- Needle Holders with or without ratchet
- Needles Holders with TC or Diamond Coating
- Needle Holders with Standard-Boxlock or Streamline Design.

The width of the Needle Holders should be adapted to the size of the suture.

We can recommend following guideline:
 0.3/0.4 mm – for sutures 8 - 0 and smaller
 0.8 mm – for sutures 6 - 0 and smaller
 1.2 mm – for sutures 5 - 0 and smaller
 2.0 mm – for sutures 2 - 0 and smaller

Advantages

Advantage of Streamline Design:

The "Streamline" prevents the suture material getting caught in the working parts of scissors and needle holders!

Advantage of Diamond Jaw:

The best Diamond coating is a micro-crystal coating with a fine layer of diamond dust.

The coating provides an optimum performance.

- Hard surface with high wear resistance
- Reliable grip for fine needles and suture, as well as for tissue
- Suitable for all sizes of sutures. Depending on the width of the Needle holder

Advantage of TC-Inserts:

Most of our Micro Needle holders are available with high quality Tungsten Carbide Inserts (TC)

- Available with smooth TC Inserts or Inserts with 0.2 mm micro serration
- Guarantee a safe holding on the needle
- Ensures a secure grip of the needles
- Provides a long lasting lifetime

micro scissors

best Streamline

best micro scissors guarantee a clear, smooth and non delaying cutting action, combined with a minimum closing pressure.

Our range includes:

- Scissors with different flat and round handles, in Standard and Streamline Design
- Adventitia Scissors with straight, pointed blades
- Dissecting Scissors with rounded curved blades
- Scissors with different length of blades
- Scissors with a micro-fine serration

best Ceramic

All our Micro Instruments can be offered with "**DLC Ceramic Coating**", which offers a number of advantages:

- Ceramic coating reach a hardness approx 4-6 times higher than TC, with the result of an extreme long lifetime of the products, especailly for our Micro Scissors
- Ceramic coating gives an resistant layer for the highest possible level of wear and tear, and improves the resistance against corrosion.
- Due to the black surface it avoids any reflection on the surface of the instrument.
